

Load Test Results for Load Test

Test properties

 Project name	REST Project 1
Project description	
Test name	Load Test
Test duration	10:00

Load allocation

Load type	Rate
Allocation type	Relative
Allocation parameters	Percentage distribution of 1000 VU(s)

Load test overview

Scenarios in the test	1
Load agents used	0
Cloud agents used	0
Servers monitored	0
Test assertions (all levels)	2

Scenario details

New Scenario

Load profile	 Ramp Up
Peak arriving users	1000
Ramp duration	10
Peak arriving users time units	Seconds
Target test case(s)	
https://library-flaskapi.herokuapp.com	5 enabled test step(s)

Test Execution Metrics

Test results

✖ Test run result	FAIL
Duration	00:05:00
Start time	19:51:16
End time	19:56:16
Maximum simultaneous virtual users	25

Information on target test cases

Test case runs, including loops	11003
Failed test cases	16
Failure ratio	0%

Load test assertions summary

Assertion checks	266
Failed assertions	2
Failure ratio	0%

Executed test step(s) summary

Test step runs, including loops	54907
Failed test steps	16
Failure ratio	0%

Response time

Longest	57659 ms
Shortest	37 ms
Average	571 ms

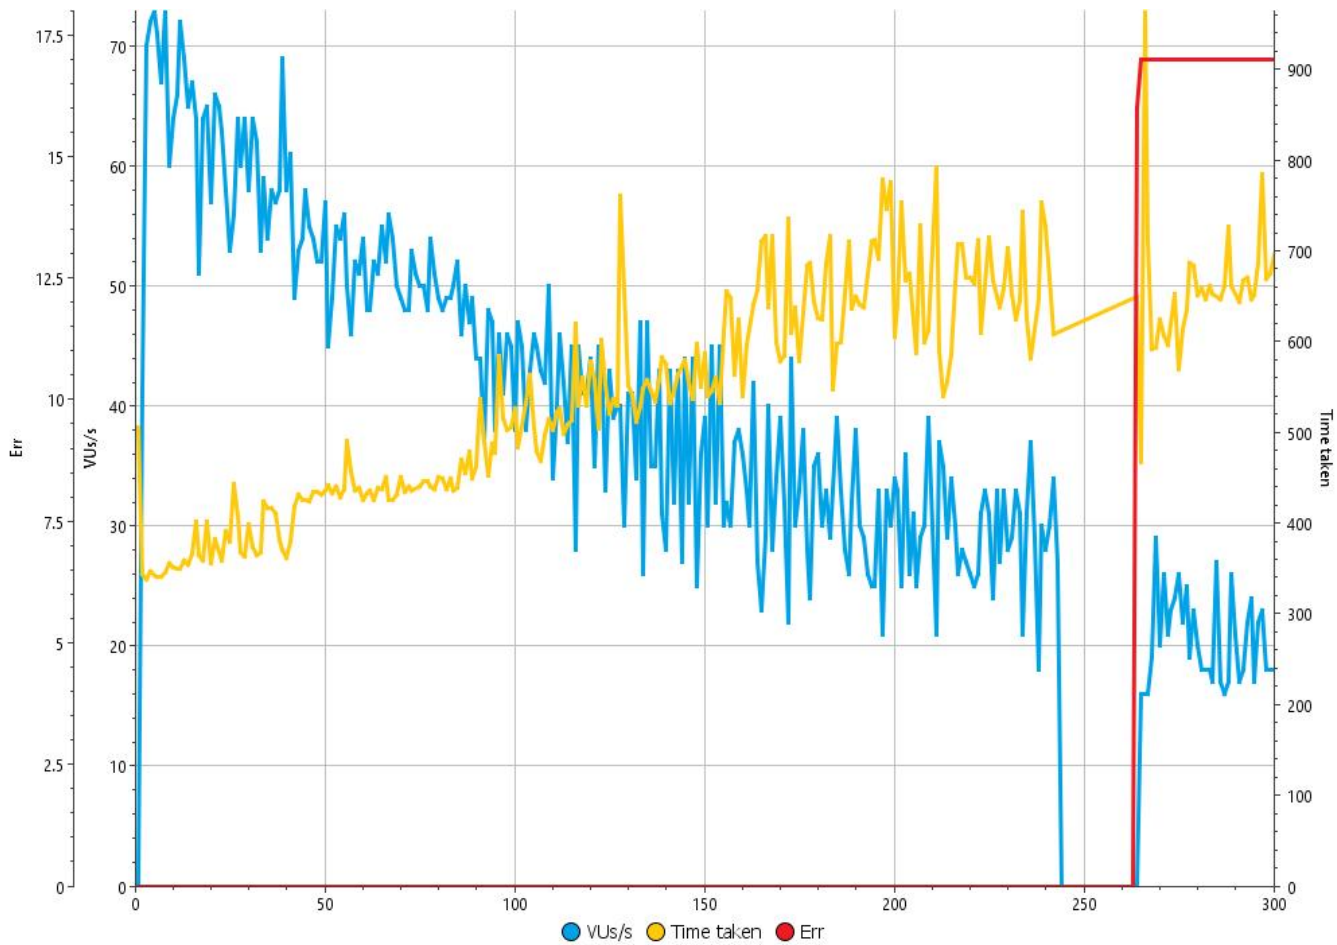

A great difference between response time values may indicate server issues.

Scenarios Summary

This section provides information about target test cases and assertions for each scenario in the load test.

Scenario name	Duration	Targets	Assertions checked	Assertions failed
New Scenario	00:05:00	11003	0	0

Overview Chart

Test Step Metrics

//library-flaskapi.herokuapp.com TestSuite:TestCase

Test step	Min (ms)	Max (ms)	Median (ms)	Last (ms)	Count	TPS	Err	Err %
Get All Books	0	1458	161	0	11003	36	2	0
Get Book By Name	0	538	71	0	10984	36	5	0
Add Book	0	521	73	0	10978	36	3	0
Update Book	0	540	73	0	10973	36	3	0
Delete Book	0	614	73	0	10969	36	3	0
Test Case Level	37	57659	483	726	11003	37	16	0

Execution dispersion

This graph shows when the 5 fastest and 5 slowest test case executions happened. The clustered values show the time when the issues occurred during the test run. For example, a lot of values at the beginning of the test might mean that you need a longer warm-up time for the server. Ideally, the values should be distributed evenly throughout the test duration.

Statistics

Stress Statistics

Terms Used in This Report

Rate load type

When you use the Rate load type, the load profile specifies how many "users" visit the tested server during a time period. The profile does not specify the number of concurrent virtual users on the server, it specifies the number of users arriving to the server.

Load allocation

In LoadUI, there are several ways to specify the load simulated by each scenario. This is called Load allocation. You can enter the total number of users and select what portion of them runs each scenario (Relative allocation), run the same number of virtual users for all scenarios (Equal allocation) or enter the number of users in each scenario individually (Per scenario allocation).

Ramp Up profile (Rate)

This load profile linearly increases the number of arriving virtual users during the load test run.

Agent

LoadUI uses agents to distribute load to other computers. Load agents run on a physical computer where the LoadUI Agent application is installed. Cloud agents run in the cloud.

Failure

Failure is a generic term for all issues that cause a simulated user to fail. For example, a test can have failures when load test assertions fail or a test step does not receive a response.

Error

SoapUI test step and test case failures that happen during the load test run are called errors.

Target

LoadUI runs SoapUI test cases to simulate user behavior. The test cases simulated in a scenario are called targets.

TPS

For test steps, number of times the test step was executed during the second.

For target test cases, the number of virtual users that finished the test case execution at each second.

Last

The time spent on the last transaction of the test.

Count

The number of times the test step was run during the test.
